MANUFACTURING COMPANY LEMA

We are a company set up in 2004 and operate under the name of Lema since 2007. Our core business is design and manufacture of digital game calls and accessories for hunting. The geography of hunter, fisherman and tourist outlets selling our products ranges from Kaliningrad to Vladivostok. We also export to near-abroad countries. Our game calls enjoy popularity among many hunters.

A hobby being practiced by many of our employees is traditional hunting and hunting photography. It is when we are out in field environment, hunting, that we draw ideas for new designs. Once our design becomes a product, we put it to test in field conditions.

In 2008 we set about recording animal and bird sounds out in the wild and have by now created a big record library that we continue to enlarge. We think this gives us a competitive advantage over domestic bird call suppliers. The recorded voices that have proved successfully performing in the field environment are made part of our standard record libraries that we supply as part of our bird call packages.

With a 10-year-long track record in Hunterhelp game call manufacturing and marketing, we offer a product that boasts quality components, advanced technologies and one-of-a-kind voice library at competitive price. Relying on the feedback we receive from hunters, Hunterhelp game calls are also products of the many-year experience in game call operation. New line of game calls offers an array of functionalities unavailable to the majority of digital game call producers. We also offer a wide range of accessories for game calls – speakers, remote control sets, amplifiers, extension cables and others. In 2016, we began to produce a variety of hunting accessories such as the hazel grouse calls, call lanyards.

MC Lema invites sellers of hunting and outdoor activity products to long-term cooperation.
